Join **Surgical House** and **HARTMANN** for an interactive educational session designed for community nurses and clinicians. This evidence-based workshop will explore the key principles of wound balance, wound bed preparation, effective exudate management, multi-layered compression therapy and best practice skin tear prevention and treatment.

Participants will gain practical insights and clinical strategies to support wound balance across community care settings.

LEARNING OBJECTIVES

By the end of this session, participants will be able to:

- Understand the principles of wound bed preparation and their role in promoting optimal wound healing.
- Recognise different levels and types of wound exudate and select appropriate management strategies.
- Apply evidence-based approaches to the assessment, prevention, and treatment of skin tears in community care settings.
- Demonstrate application and ongoing management of multilayer compression systems in community settings.
- Identify appropriate dressing selection based on wound characteristics, patient needs, and clinical goals.
- Implement practical interventions that support patient quality of life.
